

## The Facility

Chubb International Shooting Park will be situated on (15) acres in Southern Northumberland County, Pennsylvania and is just (2) miles West of Pillow, Pennsylvania. This pristine site is part of Martz's Gap View Hunting Preserves larger 1,300 acres tract and has been in operation as a family run business since the 1950's. The shooting park presently encompasses plans for two (fully covered) fields with the possible inclusion of more in the future. This range is also conveniently located close to both a regional airport (Harrisburg International Airport) as well as a major international airport (Philadelphia International Airport) to better serve the convenience of our patrons.

The shooting park will be the first "Fully Automated" Olympic Shotgun range in not only the United States, but the entire world. Operated on a key card system, this benefit allows our patrons to train at a time and frequency which meets their schedule. Olympic shooting athletes and enthusiasts from all over the United States will have the opportunity to train in an uninhibited and constructive environment at a range complex that will offer readiness 365 days a year.

Athletes and competitors wishing to train over a longer period of time will have on-site lodging available with all the modern conveniences available to them that they would enjoy at a normal hotel.

## The Olympic History

### United States Olympic Shotgun Shooting Sports Medalists

#### Men's Trap

James Graham	Gold Medal	1912 Stockholm, Sweden

# Olympic Shooting

Help support Olympic Shooting  
in the Mid-State!

## The Concept

U.S. Shooting Athletes will soon have a true state of the art Olympic Shotgun Sports facility located in the Mid-State area. Throughout the past century this has been an area rich in Shooting Sports history and promotions. This range will offer everyone from novice to Olympic athlete a (365) day access to its World Class facility for honing their skills and achieving their goals.

The facility will be built as a cooperative effort between Chubb International Shooting Sports, Inc. of Elizabethville, Pennsylvania and Martz's Gap View Hunting Preserve, Inc. of Dalmatia, Pennsylvania. It will feature Olympic Shooting Sports such as Olympic Trap, Olympic Double Trap and Olympic Skeet. Other International Shotgun Sports such as Universal Trap, Automatic Trap, Sporting Clays and Helice (a.k.a. ZZ's) will be available as well to our patrons.

## The Management Staff

Chubb International Shooting Sports, Inc. (CISS) is recognized by the U.S. Internal Revenue Service as a 501(C)(3) charitable corporation. CISS Board Members and Officers hold non-remunerated positions, so all funds will be directed to shooting programs. All donations made to CISS are tax deductible. The donations received will be immediately directed to the project and 100% of all donations will go to construction and equipment procurement costs with any residue going to support athlete training costs.

Chubb International Shooting Sports, Inc. is a corporation made up of "Shooters for Shooters". Our Officers and Board Members possess an unprecedented (200) years of combined experience in Olympic Shotgun Shooting. This experience is not limited to competi-

tive pursuits, but also incorporates positions on National Shooting Sports Board of Directors, Olympic competition staff, facility directors, competitions directors, project managers, engineers, architects, equipment distributors and technical consultants. The Board of Directors experience is not limited to only the United States, but reaches internationally as well.

## The Machinery

CISS has reviewed proposals and technical manuals from companies across the globe. We have taken the time to visit several of these manufacturers in order to better understand their equipment as well as satisfy our needs to offer the best equipment in the world for our athletes to enjoy. We are proud to announce that we have entered into an agreement with Mattarelli of Bologna, Italy as well as Elettronica Progetti of Rome, Italy to equip and electronically operate our facility. Both Mattarelli and Elettronica Progetti are recognized as leaders around the world for the quality and innovative features of their respective products. Pairing these two world class manufacturers offers our patrons unbeatable reliability and service. We are confident that partnering with these two pioneers will serve our patrons well for decades to come.

## The Coaches

CISS has aligned itself with some of the best known and well credentialed coaches and trainers throughout the World. We will offer a wide array of services from World Class Coaching to Sports Psychologists, Personal Physical Trainers and Sports Nutritionists.

CISS will organize clinics and Olympic training camps for the athletes as well as invite current Olympic and World class athletes to share their years of experience and knowledge.

## The Competitions

CISS will organize both National and World events as the staff has already done for the past 30 years at other facilities. Some of the world's best athletes will come to train and compete in Central Pennsylvania and this facility will set and maintain the highest standards of Olympic Shooting Sports promotions ever seen in this nation.

## The Impact

The construction of this facility will have a significant positive economic impact on the Mid-State region. The region will gain a tremendous amount of pride from the fact that they will have an Olympic training facility in the immediate area and that athletes from across the United States and the rest of the world will frequent and train at this state of the art complex.

## The Goals

The short term goals are to offer a top notch training and competition experience for our athletes in order to ready themselves for the challenges of international competition as we approach both the 2010 World Championships in Munich, Germany and the 2012 Summer Olympic Games in London, England.

The long term goals deal with creating a culture of excellence through example. We are developing a "Shooting Doctrine" in which training and competition promotions will be reshaped in this nation. In turn, athletes will be inspired to achieve higher and more consistent levels of performance standards, hence increasing their chances of meeting their personal and National Governing Body's goals.
